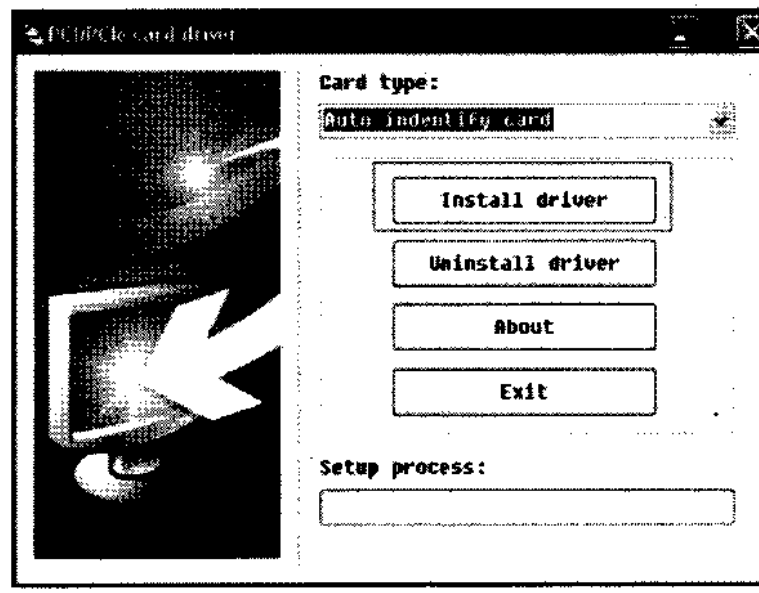
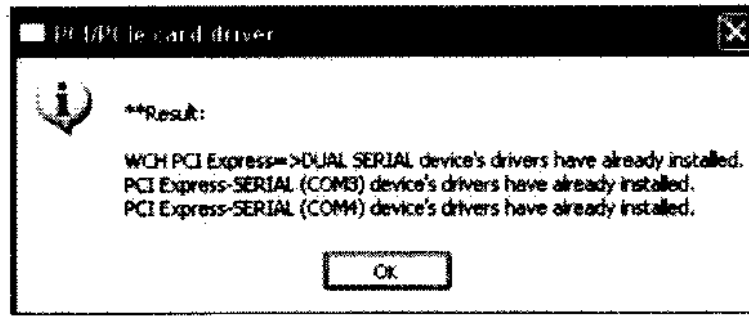
Installing Windows2000/XP/2003Server/Vista/7 Driver

Installing drivers for the first time:

Make sure that you have inserted PCIe card into PCIe slot.

Run "**PCISETUP.exe**" file from the driver disk folder. You will see a window as shown below:

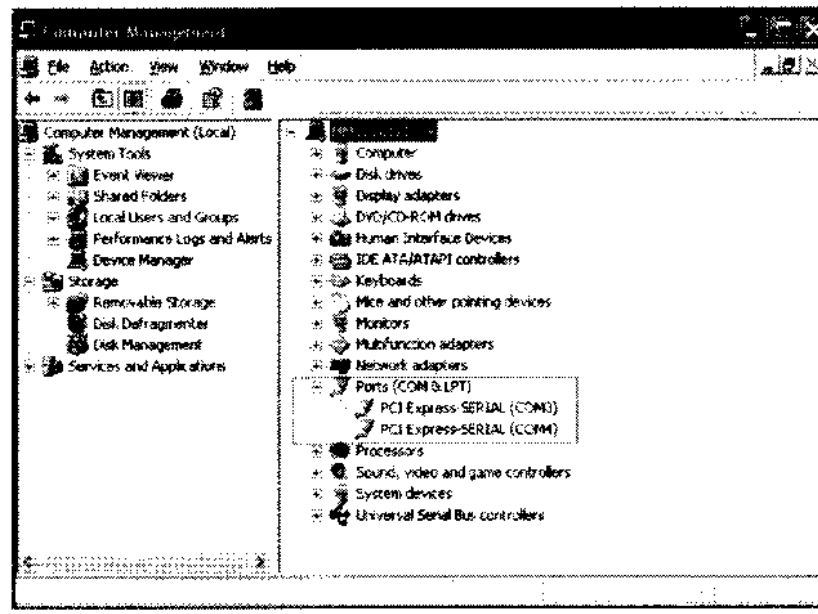




**Result:
WCH PCI Express->DUAL SERIAL device's drivers have already installed.
PCI Express-SERIAL (COM3) device's drivers have already installed.
PCI Express-SERIAL (COM4) device's drivers have already installed.
OK

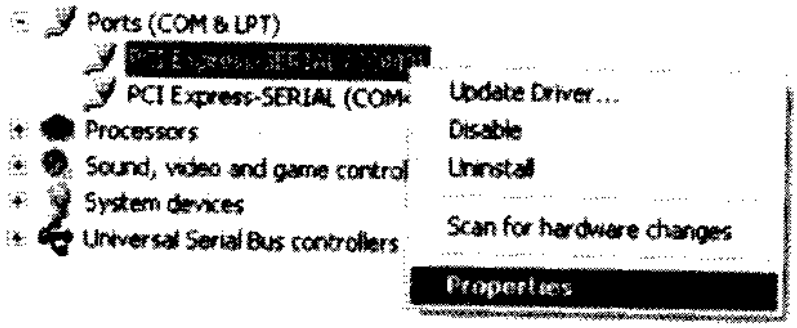
Verifying Driver Installation

Please check the required configuration from Device Manager to confirm the proper installation. For Example proper detection of the WCH382 PCIe Card (2 Serial) can be confirmed by viewing the Device manager as shown below:



Serial Port Properties Sheet

In the Device Manager Right Click on required Port and click on "Properties" Option to open the Properties page.

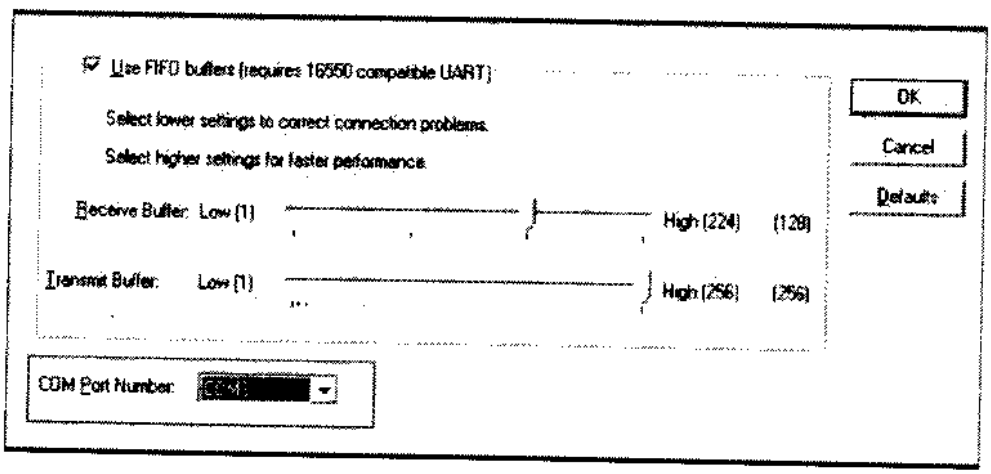


General TAB :

The **"General"** TAB provides you details about "**Device Type**", "**Manufacturer**" and "**Device Status**". The "Port Settings" TAB is used to configure parameters of the Serial Port.

Bits per Second selection is used to set the default Baud rate settings.
Data bits selection will have options 4, 5,6,7 and 8 data bits.
Parity selection will have Even,Odd, None, Mark and Space parity settings.
Stop bits selection will have 1,1.5 and 2 selections.
Flow Control selection will have Xon_Xoff, Hardware and None settings.

If you want to change the Port Number click on "Change Port Number" and select the required Port Number as shown below:

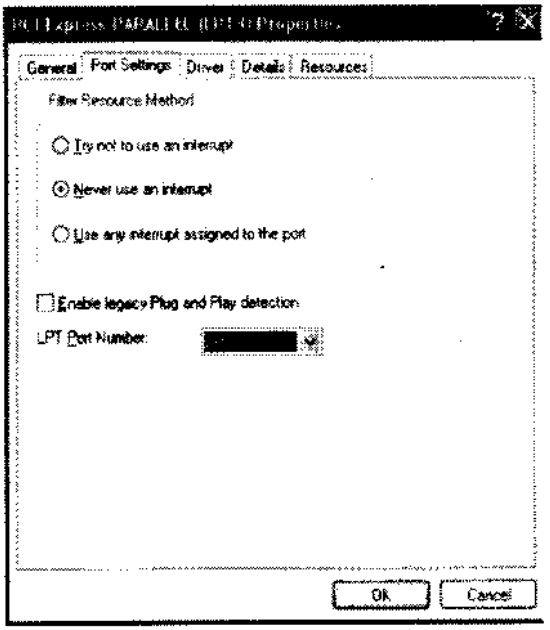


The Driver TAB shows the details of Driver Provider, Driver Release Date, Driver version is installed on your PC and Digital Signer details as shown above.

Parallel Port Features

Parallel Port Features:

Parallel port will support SPP/CBFIFO/ECP/EPP modes.. In this mode, Parallel port mode will be automatically configured to the required mode after handshaking with the connected device.



Uninstalling Drivers

To Uninstall WCH drivers, run "CH38X_PCISETUP.exe" file available in the driver disk.
